Endpoint Detection & Response (EDR)

Protect. Detect. Respond.

Powered by Acronis

Acronis

"EDR is a valuable tool for incident responders, with modern endpoint security increasingly unifying protection, detection, and response." ~ Forrester

Product Overview

Cyber threats increasingly target SMBs with ransomware, credential attacks, and other advanced threats, while many businesses lack dedicated security analysts to monitor and respond around the clock.

stc Secure360 Endpoint Detection & Response (EDR) is a fully managed endpoint security service powered by Acronis, combining next-generation antivirus and anti-ransomware, AI-based threat detection, automated threat hunting, endpoint isolation, remediation, rollback, and guided incident investigation.

Managed by the **stc SOC (add-on)**, Secure360 helps businesses strengthen endpoint protection and respond to threats without the complexity of running an enterprise EDR platform themselves.

Customer Challenges

- **Hidden Endpoint Threats:** Traditional antivirus may miss sophisticated or behavior-based attacks that require continuous endpoint detection and investigation.
- **Ransomware & Credential Attacks:** SMBs face targeted ransomware and credential-based attacks while often operating with fewer security resources and controls.
- **Limited Security Resources:** Many businesses lack dedicated security analysts to continuously monitor, investigate, and respond to endpoint threats.
- **Slow Incident Response:** Delayed investigation and remediation can allow threats to spread, increasing operational disruption and business risk.

Our Solution

- **Detect Advanced Threats:** Use AI-based threat detection and automated threat hunting to identify suspicious endpoint activity.
- **Investigate Attack Activity:** Gain guided incident investigation and attack-chain visibility to understand how threats move across endpoints.
- **Respond & Remediate:** Isolate affected endpoints, automate remediation, and roll back files impacted by attacks.
- **Strengthen Endpoint Protection:** Combine next-generation antivirus and anti-ransomware capabilities with continuous EDR monitoring.
- **Monitor with stc SOC (add-on):** Benefit from managed monitoring and security oversight from the stc Security Operations Center.
- **Extend with RMM:** Upgrade to Advanced Protection for automated patch management, device monitoring, asset inventory, remote support, and predictive hardware health monitoring.

Key Features

- Identify suspicious endpoint activity and advanced threats using AI-based detection capabilities.
- Help uncover suspicious activity that may otherwise remain undetected.
- Rapidly isolate affected endpoints to help contain security incidents.
- Support automated actions to address detected threats and reduce response effort.
- Gain guided incident investigation with visibility into how an attack progresses across an endpoint.

Business Benefits

- **Stronger Endpoint Protection:** Protect business endpoints against malware, ransomware, and increasingly sophisticated cyber threats.
- **Faster Incident Response:** Enable quicker investigation, containment, and remediation when suspicious activity is detected.
- **Reduced Security Exposure:** Strengthen endpoint security without requiring customers to build and operate their own EDR capability.
- **Predictable Security Costs:** Access managed endpoint security through a scalable per-endpoint subscription model.
- **SMB-Friendly Security:** Bring managed EDR capabilities to businesses that may not have the budget or resources for enterprise security platforms.

stc Edge

- **Regional Expertise:** Deep understanding of Gulf cybersecurity challenges.
- **Trusted Partnerships:** Powered by Acronis global threat detection technology.
- **24/7 Security Operations (add-on):** Continuous monitoring and proactive incident management.
- **Compliance-Ready:** Aligned with local and international cybersecurity standards.

Take the Next Step

Don't Wait for a Breach to Tell You Your Endpoints Were at Risk.

Protect your business with **stc Secure360 Endpoint Detection & Response**, powered by Acronis and managed by stc.

Choose the protection package that fits your business: **Standard | Advanced**
